## Steps to implement Handson Project - Mission 2

## **Amazon Web Services**

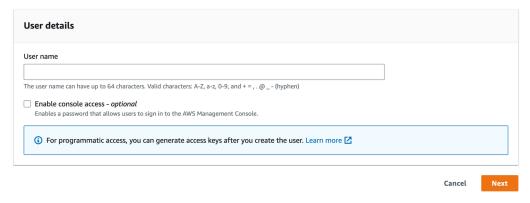

- Access AWS console and go to IAM service
- Under Access management, Click in "Users", then "Add users". Insert the User name luxxy-covid-testing-system-en-app1 and click in Next to create a programmatic user.

### Specify user details

Set permissions

AdministratorAccess-AWSElasticBeanstalk

AlexaForBusinessDeviceSetup

 On Set permissions, Permissions options, click in "Attach policies directly" button.

## Permissions options Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. Learn more Add user to group Add user to group Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function. Permissions policies (1037) Choose one or more policies to attach to your new user. Policy name A Type Attached managed policies, and inline policies to a group instead. Then, add the user to the appropriate group. Create policy Attached namaged policy fixetify to a user. As a best practice, we recommend attaining policies to a group instead. Then, add the user to the appropriate group. Permissions policies (1037) Choose one or more policies to attach to your new user. A Type Attached entities A Type Attached entities A MSS managed O Attach policies directly Attached managed policies, and inline policies to a group instead. Then, add the user to the appropriate group.

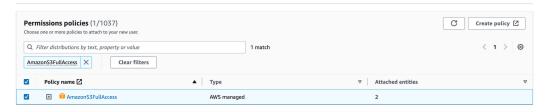

Type AmazonS3FullAccess in Filter distributions by text, property or

AWS managed

AWS managed

value, press Enter.

Select AmazonS3FullAccess

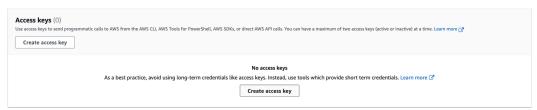

- Click in Next
- · Review all details and click in Create user

# Review and create Review your choices. After you create the user, you can view and download the autogenerated password, if enabled. User details User name terraform-en-1 Console password type None Require password reset No Permissions summary V Type V Used as V Type AmazonS3FullAccess AWS managed Permissions policy Tags - optional Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user. Add new tag You can add up to 50 more tags. Cancel Previous Create user

## Steps to create access key:

- Click on the user you have created.
- Go to Security credentials tab.
- Scroll down and go to Access keys section.
- Click on Create access key

CILL KI

 Select Command Line Interface (CLI) and I understand the above recommendation and want to proceed to create an access key checkbox.

- Click Next
- Click on Create access key
- Click on Download .csv file
- After download, click Done.
- Now, rename .csv file downloaded to luxxy-covid-testing-system-enapp1.csv

## Google Cloud Platform (GCP)

 Navigate to Cloud SQL instance and create a new user app with password welcome123456 on Cloud SQL MySQL database

0:00 / 0:20

- Connect to Google Cloud Shell
- Download the mission2 files to Google Cloud Shell using the wget command as shown below

```
cd mkdir mission2_en cd mission2_en wget https://tcb-public-
events.s3.amazonaws.com/icp/mission2.zip unzip mission2.zip
```

• Connect to MySQL DB running on Cloud SQL (once it prompts for the password, provide welcome123456)

```
mysql --host=<public_ip_cloudsql> --port=3306 -u app -p
```

 Once you're connected to the database instance, create the products table for testing purposes

```
use dbcovidtesting; source ~/mission2_en/mission2/en/db
/create_table.sql; show tables; exit;
```

Enable Cloud Build API via Cloud Shell.

```
# Command to enable Cloud Build API gcloud services enable cloudbuild.googleapis.com
```

## Known issue during this step

If you see the error below, please follow the steps to fix it:

ERROR: (gcloud.builds.submit) INVALID\_ARGUMENT: could not resolv e source: googleapi: Error 403: 989404026119@cloudbuild.gservice account.com does not have storage.objects.get access to the Goog le Cloud Storage object., forbidden To solve it: 1. Access IAM & Admin; 2. Click on your Cloud Build Service Account Example: 989 404026119@cloudbuild.gserviceaccount.com Cloud Build Service Account 3. On your Cloud Build Service Account, right side, click on Edit principal 4. Click on Add another role 5. Click on Select Role, and filter by Storage Admin or gcs. Select Storage Admin (Full control of GCS resources). 6. Click on Save and go to Cloud Shell.

Build the Docker image and push it to Google Container Registry.
 Please replace the <PROJECT\_ID> with your My First Project ID.

```
cd ~/mission2_en/mission2/en/app gcloud builds submit --tag
gcr.io/<PROJECT_ID>/luxxy-covid-testing-system-app-en
```

 Open the Cloud Editor and edit the Kubernetes deployment file (luxxy-covid-testing-system.yaml) and update the variables below in

red with your <PROJECT\_ID> on the Google Container Registry path,
AWS Bucket name, AWS Keys (from luxxy-covid-testing-system-en-

app1.csv) and Cloud SQL Database Private IP.

- Connect to the GKE (Google Kubernetes Engine) cluster via Console (follow the video)
- Deploy the application Luxxy in the Cluster

cd ~/mission2\_en/mission2/en/kubernetes kubectl apply -f luxxycovid-testing-system.yaml

- Get the Public IP and test the application (CLICK HERE to download COVID-19 Testing result sample)
- You should see the app up & running! Congrats!
